

# OSM Orchestration Exercise

## Lab 11-1 - Testing the Orchestration Sequence

By now you should have completed the deployment of the orchestration cartridge and we are ready to run some sample orders through the system to see how it reacts.

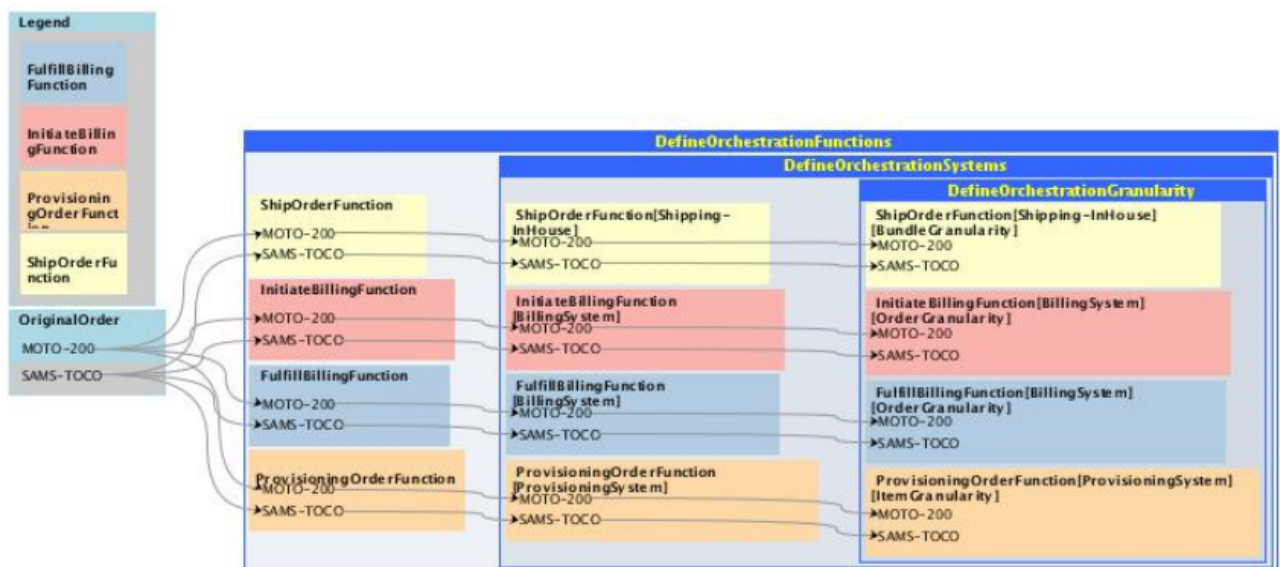

- 1) Select **Submit Test > VM\_ENV > OSM7-DD-Lab11-1.xml**
  -  A response will be sent back from OSM providing the order ID
- 2) Log into the OSM UI using Internet Explorer
  -  **http://<ip assigned to your vm>:7001/omswebui**
  -  Use the username/password provided by the instructor.
- 3) Locate your order using the search tools and view the order.

If all is working correctly you should see a panel on the left hand side similar to the following diagram

If you do not, please let an instructor know.

4. expand the **Decomposition Tree** diagram, it should look as follows:

# OSM Orchestration Exercise

## Lab 11-1 - Testing the Orchestration Sequence

- Switch to the **Orchestration Plan** tab and enlarge the **Dependency Graph** that is shown, it should look like the following.

**\*\* Note:** for those that are observant, you will note that the orchestration plan does not look as we expected, both **InitiateBillingFunction** and **ProvisioningOrderFunction** can start at the same time. We were expecting the following sequence to be generated – we will correct this in the next lab.

- Close the window and return to the osmwebui data screen.
- Switch to the **Summary** tab

**Summary** | Data | Orchestration Plan | Dependencies | Amendments | Activity

**General**

Order ID 156      Order State In Progress  
 Reference ORP-3      Target Order State  
 Version  
 Priority 5

**Order Components**

DefineOrchestrationFunctions	DefineOrchestrationSystems	DefineOrchestrationGranularity	State
ShipOrderFunction	Shipping-InHouse	BundleGranularity	Created
FulfillBillingFunction	BillingSystem	OrderGranularity	Created
InitiateBillingFunction	BillingSystem	OrderGranularity	Started
ProvisioningOrderFunction	ProvisioningSystem	ItemGranularity	Started

Notice that Orchestration has **started** 2 components, Billing and Provisioning (as per the orchestration plan)

- Log into the OSM SOM UI using Internet Explorer (do not close your current browser window, we still require this)

**http://<ip assigned to your vm>:7001/oms**  
 Use the username/password provided by the instructor.

# OSM Orchestration Exercise

## Lab 11-1 - Testing the Orchestration Sequence

 Locate your order

9. You should see 2 tasks have been started for your order

 BillingDebugTask

 ProvisioningDebugTask

10. Complete the ProvisioningDebugTask

 In the C.O.M UI refresh the view using the  button

11. You should now see the following

Order Components			
View ▾	Find	Export	 R
DefineOrchestrationFunctions	DefineOrchestrationSystems	DefineOrchestrationGranularity	State
ShipOrderFunction	Shipping-InHouse	BundleGranularity	Created
FulfillBillingFunction	BillingSystem	OrderGranularity	Created
InitiateBillingFunction	BillingSystem	OrderGranularity	Started
ProvisioningOrderFunction	ProvisioningSystem	ItemGranularity	Completed

**\*\* Note:** The Provisioning component has been completed but no other components have been started, this is because the orchestration plan says that both **ProvisioningOrderFunction** and **InitiateBillingFunction** and **ShipOrderFunction** must be completed before **FulfillBillingFunction** starts.

12. in the SOM UI complete the **BillingDebugTask**

 Refresh the worklist

 The **ShippingDebugTask** should have appeared.

13. In the COM UI refresh again.

Order Components			
View ▾	Find	Export	 R
DefineOrchestrationFunctions	DefineOrchestrationSystems	DefineOrchestrationGranularity	State
ShipOrderFunction	Shipping-InHouse	BundleGranularity	Started
FulfillBillingFunction	BillingSystem	OrderGranularity	Created
InitiateBillingFunction	BillingSystem	OrderGranularity	Completed
ProvisioningOrderFunction	ProvisioningSystem	ItemGranularity	Completed

**\*\* Note:** ShipOrderFunction has now started

14. Complete the Order using both the COM and SOM ui's

**END OF LAB**
