# OSM Orchestration Exercise
Lab 11-2 - Correcting Product Specification Dependencies

We should by now have proven that our Orchestration Plan can be generated, but we have found a flaw. The dependencies that govern when a component can start have not been setup correctly; this leads to the following Orchestration Plan

However we have been expecting to see the following sequence.

Thankfully this is not complex to change in OSM, in fact it is simply a case of modifying the **Dependencies** in the **Product Specifications**.

1. Modify the **'Product Specification' Mobile.Product.Spec**

2. Switch to the **Orchestration Plan/Dependencies** tab

3. Add the following dependency

From Order Component	To Order Component
ShipOrderFunction	ProvisioningOrderFunction

4. Save and re-deploy your cartridge.

5. Submit a new order using 'OSM7-DD-Lab11-1.xml'

6. View the orchestration plan for your new order, it should look similar to

** **Note:** by making this simple change to the dependencies we have cause a significant change to the orchestration plan.

7. Complete the order using both the SOM and COM ui's
